Apple iOS Security Flaw - Get the latest update

2021-03-29 - Don Guilbeault - Comments (0) - General

Good day all iPad and iPhone users,

Apple has identified a potential security issue that affects all iPhones and iPads. This threat know as a Zero Day security vulnerability could potentially allow malicious websites to install back ground apps on your device using the built in Apple WebKit which is an underlying applications used by most browsers on the iPhone and iPad. Apple has released an update for your device if required.

Define – Zero Day: "Zero-day" security flaws are those that are used in attacks before software developers become aware of the flaws — the developers have "zero days" to fix the flaws.

To check for updates see below:

Update iPhone manually

At any time, you can check for and install software updates.

Go to Settings > General > Software Update.

The screen shows the currently installed version of iOS and whether an update is available. If the is an update simply tap Download and when the Download is complete Tap install. Your device may require a restart.

Automatic Updates

Your Apple Device may have already received the update with the automatic update process:

Automatic updates install over night while your device is plugged charging and is connected to WIFI.
